SUMMARY

As an accountancy graduate with a strong foundation in financial principles and a keen eye for detail, I have successfully transitioned into a developer role. Leveraging my analytical skills and dedication to accuracy, I've embraced coding and software development to create efficient and innovative solutions.

EXPERIENCE

05/2022 to Current

React Developer
Cloud Employee – Makati Philippines
- **Designing and Developing User Interfaces:** Create user-friendly and visually appealing web applications using React.js.
- **Component Development:** Build and manage React components for efficient code organization and reusability.
- **Integration with APIs:** Integrate frontend components with backend APIs and services to fetch and manipulate data.

10/2020 to 05/2022

Full-Stack Developer
Sevron – United Kingdom
- **Web Application Development:** Develop and maintain web applications using Laravel, React, and jQuery.
- **Performance Optimization:** Identify and resolve performance bottlenecks, optimizing the application for speed and efficiency.
- **Customer Assistance:** Provide technical support and assistance to end-users, helping them resolve issues or answering questions.

04/2020 to 10/2020

Full-Stack Developer
Guerilla360 – Makati, Philippines
- **Web Application Development:** Develop and maintain web applications using Laravel and React.
- **Client Interviews:** Conduct interviews or meetings with clients to gather detailed information about their business processes and requirements.
- **Ticket Management:** Manage support tickets and user inquiries efficiently, ensuring prompt responses and resolutions.

06/2017 To 12/2019

IT Business Analyst / SQL Developer
NOAH – Makati Philippines
- **Requirements Analysis:** Analyze and document client requirements, including business rules, constraints, and objectives.
- **Documentation:** Create comprehensive documentation that outlines the gathered information, ensuring clarity and accuracy.
- **Wireframes:** Develop wireframes that outline the layout and structure of web pages or application screens, focusing on content placement and user flow.
- **Process Visualization:** Create flowcharts to visually represent the flow of data, logic, and processes within the application.
- **Data Modeling:** Develop a data model to define the structure, relationships, and entities within the SQL database.
- **SQL Development:** Define stored procedures, functions, and triggers to encapsulate business logic within the database.
- **Training:** Offer training sessions or resources to help users make the most of the application's features.

SKILLS

- React (Javascript/Typescript)
